

Basic Practice-1

Problem Statement:

You will learn how to create tables, work with where clause and basic operators

Tasks to be done:

1. Create a customer table which comprises of these columns – 'customer_id', 'first_name', 'last_name', 'email', 'address', 'city', 'state', 'zip'
2. Insert 5 new records into the table
3. Select only the 'first_name' & 'last_name' columns from the customer table
4. Select those records where 'first_name' starts with "G" and city is 'San Jose'
